In the Specifications:

Please add the Abstract on the separate sheet which is attached as Exhibit A, and amend the following paragraphs in specification to read as follows:

Page 3, paragraph 6 has been changed as follows:

--The invention is based on the understanding that with a light-sensitive sensor with a two-dimensional sensor surface as the starting-point, a text recording function, i.e. a "scanner function", as well as an image recording function, i.e. a "camera function", can be easily created in the same device. More specifically, the device is adjustable between a first mode, in which the device is adapted to essentially abut against and be passed over a surface for imaging the same by means of a plurality of images, and a second mode, in which the device is adapted to image an object located at a distance.--

Page 8, paragraph 7 has been changed as follows:

--This window 2 forms an acute angle to the longitudinal axis of the device so that in the first mode the user is guided to hold the device at a predetermined angle to the underlying surface. Furthermore, the window 2 is somewhat recessed in the casing 1 so that it does not wear against the underlying surface when the device is used in the first mode.--

Page 12, paragraph 5 has been changed as follows:

--Our Swedish patent application No. 9704924-1 and the corresponding US Application No. 09/024,641, describe an alternative way of matching the images in order to find the best
